Clients revolutionize their research: 85% time saved thanks to YUKKA Lab's News AI! Identify 10x more risk events!

According to current studies, more than 80% of all data in companies is unstructured, including financial and economic news, reports, commentaries or text documents. Obtaining information from this in a timely manner is therefore crucial for your success.

As a pioneer of artificial intelligence (AI) technology, YUKKA Lab analyzes more than 750,000 news items from more than 150,000 licensed and public sources (web) every day. It translates them into business-relevant metrics and signals for risk management, sustainability issues (environmental, social and governance - ESG), investment management and sales departments. To this end, YUKKA has trained its self-developed analysis software to have a language and reading comprehension similar to that of a human. You'll save a lot of time in analysis and make better decisions!

Risk Management

- News-based risk metrics
- Credit Rating Prediction
- Real-time alarms
- Counterparty Monitoring

Sales & Consulting

- Pitch Preparation
- Customer Monitoring & Newsletter
- Event-based sales leads
- Trend & Market Analysis
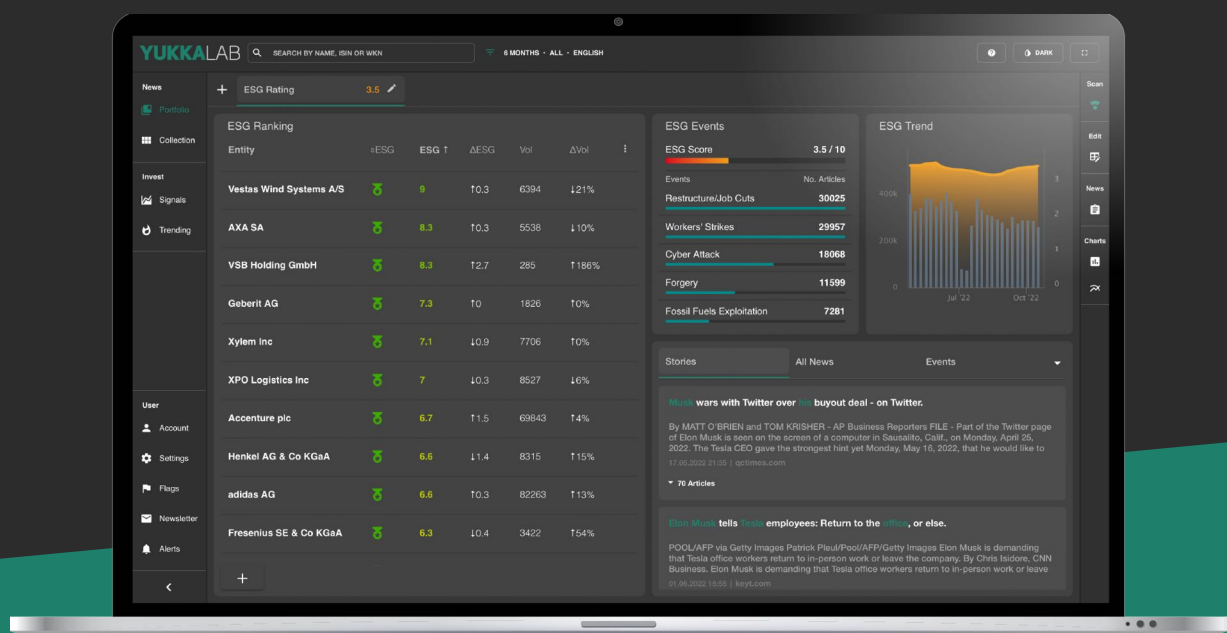

Environmental, Social and Governance

- News-based ESG metrics
- Focus on sustainability efforts
- Break down by Events & News
- +100,000 companies covered

Client Management

- News-based customer interaction
- Appointment Preparation
- Portfolio Monitoring
- Topic monitoring

Our AI-based software processes the news with the inexhaustible endurance and precision of a machine. Like an assistant, our software analyzes all news at the article and sentence level and informs you which companies, customers and topics you should keep an eye on. Equip your experts with our news analytics and trend signals to make better-informed decisions and gain a competitive advantage.

RISKLAB

Next-generation risk management

According to current studies, more than 80% of all data in companies is unstructured, including financial and economic news, reports, commentaries or text documents. Obtaining information from this in a timely manner is therefore crucial for your success.

- Identify **10x** more risk events
- Tailor-made risk assessments for your business
- News-based risks condensed into one metric
- Alerts on important events and developments
- Forecasting models for upcoming risk and rating changes

ESGLAB

News-based, real-time sustainability assessments

Track and monitor the impact of your investments, supply chains, and business partnerships in real-time with our news-based ESG metrics and underlying news. Based on over 100 relevant ESG events (e.g. greenwashing, CO2 emissions, climate change) YUKKA Lab scours the global news to provide an outside-in perspective on companies' sustainability efforts:

- **25x** increase in productivity
- Real-time, news-based ESG metrics
- Make existing ratings explainable
- Discover the events and news behind ESG ratings and metrics

NEWSLAB

Unique news trend overview

YUKKA Lab measures the media exposure of each company, industry, and country in real-time, showing the news trends and events that drive them. To do this, you will get access to the underlying online and licensed full-text articles:

- Monitor over 100,000 public and private companies in real-time
- Access to licensed full-text articles and a history of over two years
- Discover outliers based on news volume and mood swings
- Make better decisions based on intelligent news research
